EDUCATION

Vishwakarma Institute of Information Technology

B.Tech in Electronics & Telecommunication Engineering (CGPA: 8.96)

Pune, Maharashtra

November 2020 – May 2024

Rajarshi Shahu Mahavidyalaya

HSC (12th) (Percentage: 82.46)

Latur, Maharashtra

June 2019 – July 2020

Dnyanprakash Vidyaniketan

SSC (10th) (Percentage: 100)

Latur, Maharashtra

June 2017 – June 2018

EXPERIENCE

Vodafone Intelligent Solutions (VOIS)

Dec 2024 – Present

IT Deployment Engineer

Pune, Maharashtra

- Led Enterprise Data Warehouse (EDW) and ETL workflow automation using **Python**, automation tools, and **CI/CD pipelines** across UK data pipelines.
- Contributed to **EDW** process automation using **Ab Initio** Graphs, **Teradata SQL**, and **Unix/Linux** for **ETL**, data processing, reconciliation, and downstream delivery, while centralizing runbooks, process documentation, troubleshooting, and error-resolution knowledge.
- Led data quality, deployment, and production-readiness initiatives across large-scale **telecom** data environments, ensuring reliable data delivery and smooth production transitions.
- Partnered with **architects**, **Technical Delivery Managers**, and **business stakeholders** to drive technical delivery, manage dependencies, prioritize workloads, and align data initiatives with release objectives.

izDOX.ai by bizAmica

January 2024 – June 2024

Software Intern

Pune, Maharashtra

- Contributed to **AI product development** using **Python**, **Flask/Django**, **MySQL**, and **Angular**, developing REST APIs, web applications, and machine learning workflows.
- Worked with **Docker**, **Kubernetes**, **Linux**, **CI/CD**, and **microservices** to support scalable software infrastructure, application deployment, and service integration.
- Applied **Generative AI** and **Deep Learning** while contributing to **software design**, **API integration**, **collaborative problem-solving**, and **product delivery**.

PROJECTS

Skin Lesion Classification using Deep Learning

June 2023 – June 2024

- Developed an end-to-end skin-lesion classification pipeline using CNNs and Autoencoders on the HAM10000 dataset (10,015 images, 7 classes), achieving 90% validation accuracy with CNN and 66% with Autoencoder.
- Engineered data preprocessing and model-training workflows to address class imbalance and low-resolution constraints (256×192), evaluating CNN architectures, optimizers, and AutoKeras for improved classification performance.
- Performed comparative model evaluation across multiple approaches, analyzing validation metrics and classification results for multiclass medical image classification.

Skin Lesion Classification using Deep Learning

June 2023 – June 2024

- Developed an end-to-end skin-lesion classification pipeline using CNNs and Autoencoders on the HAM10000 dataset (10,015 images, 7 classes), achieving 90% validation accuracy with CNN and 66% with Autoencoder.
- Engineered data preprocessing and model-training workflows to address class imbalance and low-resolution constraints

TECHNICAL SKILLS

Programming: Python, Java, SQL, Unix/Linux

AI/ML: : Machine Learning, Deep Learning, Computer Vision, Generative AI, CNNs, Autoencoders

Data Engineering: ETL, Data Pipelines, Data Processing, Enterprise Data Warehouse (EDW), Data Quality

Databases: Teradata, MySQL

CERTIFICATIONS

Professional Data Engineer: Google

Cisco: : CCNAv7: Introduction to Networks, Introduction to Cybersecurity

ISTQB: Foundation Level

EPAM Systems: Front-End Technologies
